Thank you very much for the review. We are very happy with your comments. There may please be an update! I created a group folder and a sticker with no issues at first. But when I wanted to add another photo to create new stickers, the app just keeps pasting in uploading the photo from my photo library. I've left it that way for a couple of minutes and the photo never loads. I paid for the full version of this app. I hope I don't waste my money on something that doesn't work properly. Hi! Wemoji Not technically a packet of stickers on yourself (don't worry, there's a lot on this list), but probably the best tool when it comes to making your own bespoke WhatsApp stickers. One of the best features of Wemoji is the freehand growing feature, which allows you to accurately cut out contours of faces, people, whatever you want to use on your sticker. There are plenty of other editing features here, including plenty of fonts to use in text for your emoji and a convenient organizer for your custom emojis, allowing you to create different categories to organize them.
